Exciting! Which solution are we talking about here?

— **Vince's Excel add-in**, VXL. We use it to view our inventory segmented by channel, manage stock allocations, and streamline the creation of sales quotations and orders. These are areas where we had major pains before.

Spykar Lifestyles is India's top fashion jeanswear brand, available in over 300 exclusive Spykar stores and well over 1200 other multi-brand stores.

How did you end up using Vince?

– We evaluated several products. Vince stood out as the best option.

– **It integrated well with our ERP system, Infor M3**. It also had the functionality we were looking for and was easy to both set up and use.

VXL in a nutshell:

Lets you work with M3 data directly in Excel, *which means handling way more data in a lot less time, better overview and fewer errors.*

How's working in Excel been?

– Our users are very comfortable working in Excel, so using the Excel add-in for data uploading instead of manual data entry was a welcome change!

Rupendra Nigam, Spykar Lifestyles

And now? The pains are gone?

– Yes! VXL has given us a better overview, faster and smoother order creation and reduced the number of transactions drastically.

You want to have a go at a Vince sales pitch?

– Sure. If you're looking to streamline bulk sales or purchase order creation, with built in validation, this is the right tool. It also allows users to pull reports directly from the ERP into Excel for easier data handling.

– It's simply a very good product that's very easy to use.
